

POLICE CAR PERSONAL ALARM

Police-themed personal attack alarm

Product Code: AL00042

Introduction

The Police Car Personal Alarm is a novelty-designed personal attack alarm that emits a powerful 130dBs siren to deter attackers. Modeled on a police car, the unit also has a blue LED torch feature within the headlights, which double as a flashing blue strobe when the siren is activated.

Operation

Before using the Defender MKA Torch for the first time please remove the plastic tab from the battery compartment (see below section).

To activate the alarm, simply pull the key ring attachment out of the alarm. To de-activate replace the pin into the alarm.

The alarm can also be activated via the SOS button above the left headlight of the car, marked with a siren icon. Press and hold to activate and release to deactivate.

The headlights feature blue LEDs which will flash during any siren operation. You can also activate the torch by pressing and holding the button above the right headlight, marked with a light icon.

Batteries

The alarm is shipped with a plastic battery tab installed to save power. Remove this before first use by pulling the tab that is protruding from the battery compartment on the underside of the alarm.

It is recommended that the alarm is tested regularly. If the alarm sounds weak, the batteries should be replaced. Remove the single screw located on the bottom rear of the alarm, remove the battery compartment cover and replace the batteries, noting the correct polarity. Re-screw the compartment cover and test your alarm. The unit operates on 2 x AAA batteries.

WARNING

This alarm is not a toy. Do not shine the torch light directly into eyes. The 130dBs siren is loud and prolonged exposure can cause damage. If testing, do so briefly and at arm's length.
