

TWIN LIGHT KEYCHAIN TORCH

Product Code: OT00221

Introduction

The Twin Light Keychain offers both an ultra bright white LED torch and 365nm UV torch in one compact unit. The UV torch is particularly useful to detect counterfeit currency or ID, or to identify property that has been marked with UV ink or with DNA marking such as Smartwater™ or SelectaDNA™.

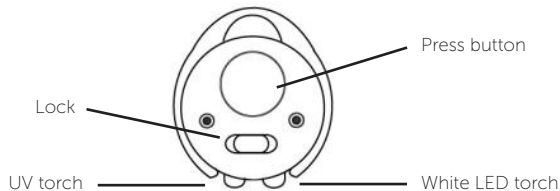

For optimum performance of this UV Light please position the torch within 5.5cm +/- 20% of the item being investigated for UV markings.

Note:

The performance of the UV Light will be affected by ambient light conditions – if possible use the UV light with low ambient light or with no ambient light.

Operation

Before first use, remove battery tab. With the torch pointing away from you slide the switch across to the left to move the unit into torch mode. Hold down the 'press button' as shown below to illuminate and release to switch off. Slide the switch right to put into the off position.

Slide the switch to the right side and the keychain is in UV mode. Press and hold the hold button to illuminate UV facility, release the 'press button' to turn off the light. Slide the switch to the left to put back into the off position.

Battery replacement

Unscrew the two screws and remove cover as shown in the figure below.

Unscrew the inside screw and remove contact plate. Lift out the batteries and replace with 2 x CR2016 batteries. Once new batteries are installed, replace contact 'T' strip and cover.
