

Defender®

PORTABLE PANIC ALARM

Multi-Purpose Lightweight Alarm

Product Code: AL00041

Introduction

The Defender Portable Panic Alarm combines versatility with a modern, ultra-thin design. Activated via push button, the piercing 130dBs siren attracts attention and deters aggressors. As well as being carried, this alarm can stick and re-stick to any flat surface thanks to its unique re-usable adhesive pad. Popular locations include near doors, under tables, or on the rear of phones.

Operation

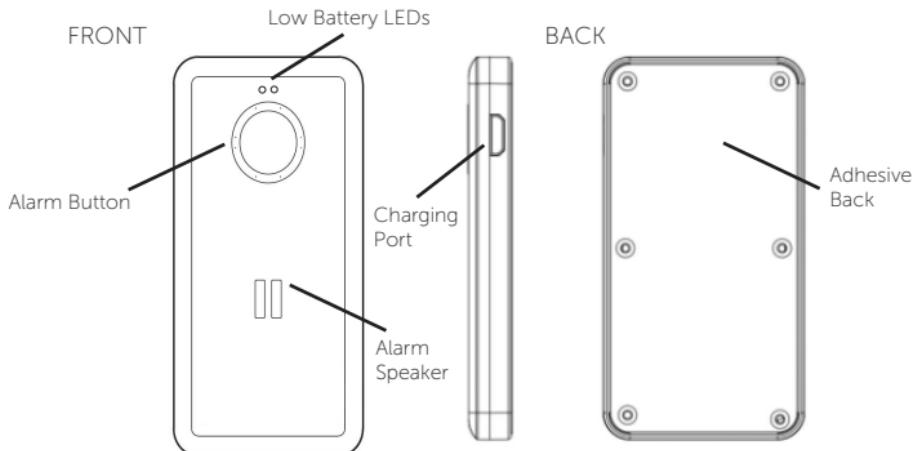

Please Note: it is recommended to fully charge your alarm before first use. See the battery section overleaf.

The Portable Panic Alarm utilises a user-friendly push-button operation.

Press and hold the alarm button for 2 seconds and the siren will sound.

Press and hold the alarm button for another 2 seconds and the siren will stop.

NOTE: the siren is an extremely loud 130dBs - if testing, do so at arm's length.

Applications

Your alarm comes with a protective film over the adhesive back. If you wish to stick the alarm to a surface, remove this film and apply light pressure until your alarm stays in place. You can then remove and re-stick your alarm as desired.

If you wish to use the alarm on the move after sticking, then use the protective silicone strip to cover the adhesive.

Note: each time the adhesive rear is applied, it will lose around 5% of its stickiness.

The adhesive pad can be wiped with a damp cloth for cleaning if desired, which can improve the sticking power after a few uses.

Batteries & Charging

This alarm is powered by a rechargeable 3.7v lithium battery. When the battery is low and the alarm is activated, the red LEDs will flash at the same time as the siren.

You can also test the battery level by briefly single pressing (not holding) the alarm button. If the LEDs flash red, the battery is low and should be charged.

Connect the unit to power using the USB cable supplied. When charging, the LEDs will glow red; when charge is complete, the LEDs will glow green.

A full charge can take between 1-3 hours depending on starting battery life.

Battery life varies depending on usage; but the low power consumption nature of this alarm means it has a maximum standby time of up to 6 months.

NOTE: the lithium battery is sealed within the unit. Do not try to open the unit. There is no requirement to open the unit to access the battery and you should charge using appropriate cables only.
